

CLAIM AMENDMENTS

1. (canceled)

1           2. (currently amended) The electrical sleeve heater  
2 defined in claim ~~[[1]]~~ 11 wherein the inner sleeve is formed with  
3 at least one axially open and extending slot.

1           3. (currently amended) The electrical sleeve heater  
2 defined in claim ~~[[1]]~~ 11 wherein the inner sleeve is formed with  
3 two axially extending and axially oppositely open slots.

1           4. (original) The electrical sleeve heater defined in  
2 claim 3 wherein the slots are angularly equispaced.

1           5. (currently amended) The electrical sleeve heater  
2 defined in claim ~~[[1]]~~ 11 wherein the inner sleeve has an axially  
3 outwardly flared outer surface engageable with an end of the outer  
4 sleeve.

1           6. (original) The electrical sleeve heater defined in  
2 claim 5 wherein the outer surface is about 10 mm long.

1           7. (currently amended) The electrical sleeve heater  
2 defined in claim ~~[[1]]~~ 11 wherein the outer sleeve has an axially  
3 tapered inner surface axially engageable with an end of the inner  
4 sleeve.

1           8. (original) The electrical sleeve heater defined in  
2 claim 7 wherein the tapered inner surface is about 10 mm long.

9. (canceled)

1           10. (currently amended) The electrical sleeve heater  
2 defined in claim ~~[[1]]~~ 11 wherein the outer sleeve has a radially  
3 inwardly projecting rim.

1           11. (currently amended) A sleeve heater comprising:  
2           an electrical and generally cylindrical heater coil  
3           centered on an axis and shaped to fit over a part to be heated;  
4           a radially compressible and generally cylindrical inner  
5           sleeve snugly coaxially externally surrounding the heater coil,  
6           radially inwardly bearing on the coil, and having an axially  
7           outwardly projecting tab; and  
8           a radially generally inextensible and generally  
9           cylindrical outer sleeve fitted coaxially over the inner sleeve and  
10          having an inner surface bearing tightly radially inward on the  
11          inner sleeve and radially compressing the inner sleeve and the coil  
12          inward, the outer sleeve being formed with a cutout in which the  
13          tab fits when the sleeves are fitted together, ~~and a radially~~  
14          ~~generally inextensible and generally cylindrical outer sleeve~~  
15          ~~fitted coaxially over the inner sleeve and having an inner surface~~  
16          ~~bearing tightly radially inward on the inner sleeve and radially~~  
17          ~~compressing the inner sleeve and the coil inward.~~

12. (canceled)

1           13. (currently amended) The electrical sleeve heater  
2           defined in claim [[1]] 11 wherein both sleeves are of metal.

1           14. (currently amended) The electrical sleeve heater  
2 defined in claim [[1]] 11 wherein the inner sleeve has an outside  
3 diameter and the outer sleeve has an inside diameter that is  
4 smaller than the inner-sleeve outside diameter, whereby when the  
5 outer sleeve is fitted over the inner sleeve it radially compresses  
6 the inner sleeve.

1           15. (previously presented) The electrical sleeve heater  
2 defined in claim 11 wherein the inner sleeve is formed with at  
3 least one axially open and extending slot.

1           16. (previously presented) The electrical sleeve heater  
2 defined in claim 11 wherein the inner sleeve has an axially  
3 outwardly flared outer surface engageable with an end of the outer  
4 sleeve.

1           17. (previously presented) The electrical sleeve heater  
2 defined in claim 11 wherein the outer sleeve has an axially tapered  
3 inner surface axially engageable with an end of the inner sleeve.

18 - 21. (canceled)
